INTERNATIONAL

WHO set new guidelines to global air quality norms

- WHO sets new guidelines to **reduce global air pollution from the limits set in 2005**, since its impact on health from the past decade increased.
- This move does not have an immediate effect in India as the **National Ambient Air Quality Standards (NAAQS)** does not meet with WHO's existing standards.
- The WHO guidelines states the annual average concemtrations of P.M 2.5 should not exceed 10 μ g/m3, while 24-hour average exposures should not exceed 25 μ g/m3 more than 3 times a year.
- Three interim target standards recommended by WHO for cities lagging from their goal:
- 1. 15 μg/m3 annual mean, 37.5 μg/m3 24-hour mean
- 2. **25 μg/m3 annual mean, 50 μg/m3 24-hour mean**
- 3. 35 µg/m3 annual mean, 75 µg/m3 24-hour mean.
